Abstract

This database program provides the needed and storing information in a faster, more convenient way by storing file of the student enrollees. In this database program, stored information can be viewed in just a second without worrying that a single file is lost. This study is a descriptive developmental process of research using a standardized evaluation for database program interface evaluated by of four curriculum chairmen, 40 teacher-9 school heads, and 1 IT specialist. Mean was used to determine the level of acceptability of the computerized student information database program according to the extent of reliability, efficiency, accuracy, user-friendliness, security and confidentiality. Findings shows that the main menu has a user-friendly interface. It also provides the ease of recording, searching, editing and deleting of data input on the database. The proposed program will lessens paper works and can provide accurate reports. By using the program, you can easily do task with an easy access with just a few clicks of buttons and filling in the form with a database program.
